

WITH MGM BRAKES.

TR-LP3 / TR-TLP3

The TR Series is also available in a long stroke design, providing the reserve stroke needed for added braking safety.

LTR-T / LTR-L3

These models feature a six-year limited warranty and come standard with an integral release tool, all aluminum head, and a long life power spring. Also available in a 3-inch Long Stroke version that provides the reserve stroke needed for added braking safety. A new power spring has been designed to help eliminate coil clash and allows the elimination of the breather tube on the Long Stroke model.

"MAGNUM" SERIES

MGM Brakes Magnum type brakes are popular for use in demanding parking and vehicle holding situations. When hauling maximum payloads through mountainous terrain or when quick release at low pressure is important, a "Magnum" is your best choice.

e•STROKE®

Our latest and greatest innovation in brake safety! A state of the art electronic brake monitoring system designed to take brake inspection to the next level. Continuously monitor your brake stroke status from the comfort and convenience of your cab. Imagine not having to crawl under your truck or trailer before every trip!

e•LINK™

An in-cab communication device providing real time communication between trailer and tractor indicating the trailer brake status. e•LINK plugs into the cigarette lighter or auxiliary power supply of the tractor and receives a signal sent from the e•STROKE trailer. e•LINK uses colored LED lights to instantly verify the function of trailer brakes monitoring park brake release, out-of-adjustment, dragging and non-functioning brakes.

e•STROKE and e•LINK are in-cab, en route, pre-trip, Anytime...Anywhere...Any weather.

MORE WAYS TO STOP....

MGM Brakes offers six performance-engineered double-diaphragm spring brakes to choose from, plus several piston models. Select the model that best suits your need for S-Cam or air disc foundation brakes.

TR

The industry standard double-diaphragm spring brake and original tamper resistant safety design.

TR-T

The same brake design as the tamper-resistant Model TR, this MGM Brakes model features the addition of the External Breather Tube System.

TR-TS

Same as the TR-T, but epoxy-coated inside and out for extra protection in unusually tough, corrosive operating environments.

TR-HD / TR-THD

The same brake design as the tamper-resistant Model TR, but this MGM Brakes model features 160 lbs. of extra parking force and our positive alignment system. The PAS system prevents spring skewing, reduces power spring stress, reduces coil clash and increases center seal life.

TR-THDW

Same quality components as TR-THD Model, except with "weld" reinforced mounting bolts, providing a stable, strong mounting base for installations on equipment with reverse cam rotation, heavy-duty suspensions, or on vehicles utilizing wide "single type" tires, or any combination of those components where extreme vibration is a concern.

We make the difference.

When You Go With MGM Brakes, You've Got More Ways To Stop.

Choosing MGM Brakes was the smart choice

Now, let us help you choose the correct brake for your job and operating environment.

MGM Brakes gives you choices like no one else, which means you can match exactly the right brake to meet your needs, for maximum performance and cost efficiency.

At MGM Brakes, innovation never stops...

Whichever MGM Brakes model you select, you'll be getting a spring brake designed and manufactured by the acknowledged worldwide leader. Since MGM began in 1956 with the patent for the first spring parking brake, to today, where MGM Brakes is the leader in the design and development of the first electronic brake stroke monitoring system, we've continually led the way with industry firsts:

- Patented the first spring parking brake
- First brake with built-in manual release bolt
- First to offer flat-bottom NPC
- First to offer external breather tube
- First to offer "Steel Head" service chamber
- First to design & patent tamper resistant brake (TR)
- First to offer full line of 3-inch long stroke spring brakes and service chambers
- First to offer welded yoke
- First to offer visual stroke alert indicator
- First to design and patent electronic stroke alert (e•STROKE®)

With MGM Brakes you can be confident you're equipping your fleet with products that are on the cutting edge of technology . . . and the "standard choice" of truck manufacturers worldwide.

A few things to remember...

This brochure is designed to assist you in choosing which MGM Brakes model is best suited to meet your needs. With that in mind, there are a few things to remember:

MGM Brakes Long Stroke Cutaway View

- Every MGM spring parking brake is assembled using the "tamper resistant" design, which prevents inadvertent or accidental release of the powerful spring housed inside the head of the brake; and the orange "Stroke-Alert" stripe that provides a visual indicator when stroke adjustment is required.
- All MGM Brakes "spring brakes" feature the MGM exclusive pressure-activated nitrile rubber adapter-case push rod air seal and aluminum "hard-coat" finished push rod with nylon guides, both designed to retain lubrication and provide extended service life.
- Corrosion Fighter technology is a new standard feature in all our TR model chambers to fight harsh elements in the environment.
- MGM Products offer the benefit of an extra heavy-gauge steel mounting base (NPC), epoxy-coated inside and out for protection against corrosion, with Grade 5 self-locking nuts and hardened steel flat-washer mounting hardware to ensure a strong, dependable mounting platform.
- Brakes designed for use in the Vocational Market feature the MGM Brakes designed External Breather-Tube which limits ingestion of corrosive contaminants and moisture, providing extended operational service life in the harshest environments.

All of these "standard" features make the case for why you should choose MGM Brakes over other brands. Now, let's find the MGM Brake best suited to meet your requirements.

MGM Brakes manufactures a wide variety of spring brakes, many designed specifically for niche applications. While all MGM models are engineered for the longest life and most reliable service, choosing the right spring brake for a particular application is crucial to ensuring maximum value.
